

Your guide through the Oregon legislature.

Fortune 500s have entire government affairs teams. You have a roster of clients and a session that never slows down. LobbySherpa is the platform Oregon's boutique firms use to track every measure, every amendment, and every testimony — in real time, without missing a thing.

THE SHERPA PROMISE

We are not the hero. **You are.**

We filter the noise
You find the signal.

We bring the intel
You own the strategy.

We map the terrain
You conquer the summit.

WHY WE BUILT THIS

Good measures die and bad measures thrive because the right people didn't know in time.

Measures change an hour before a meeting; amendments get buried in procedural language. The 2025 long session alone brought 3,700+ measures, 100,000+ testimony submissions, and 43 committees to track. For a lean firm juggling dozens of clients, that's not a people problem — it's a coverage problem. Here are the six capabilities that solve it, used together as a firm or à la carte by a solo lobbyist.

01 Measure Analytics

Every measure in one place — AI summary, statutes amended, sponsors, fiscal impact, text versions, timeline, and votes. No more bouncing between OLIS and a dozen browser tabs.

02 Measure Triage

From the introduction flood to a managed queue — a structured workflow where every measure gets an owner and nothing slips through before the week is out.

03 Testimony Intelligence

It reads every testimony, clusters the arguments by theme, and names the organizations behind them — so you walk into the hearing knowing the full landscape.

04 Real-time Alerts

Amendments, work sessions, sudden movement — tracked in real time and delivered in the app, by email, or by text the moment it happens.

05 Client Enablement

A report builder that turns out polished client deliverables in minutes, and a portal where clients set their own priorities — without a single email chain.

06 Team Empowerment

See who owns what and what's still unassigned; every member gets a clear personal queue. Nothing falls through, no one has to ask.

CONFIDENTIALITY, BUILT IN

ACCOUNT ISOLATION

What you track and who you represent is never visible to other accounts.

NO AI TRAINING

Your activity and client context do not train our models. Ever.

PRIVATE WORKFLOW

Public OLIS data in. Your strategy and positions stay yours alone.

The 2027 session starts January 11. Get set up before measures start moving.

We're onboarding Oregon boutique firms and government affairs professionals now.
